

FOR IMMEDIATE RELEASE

Dartware continues to expand InterMapper's wireless network monitoring capabilities with Inscape Data partnership

June 5, 2007, Hanover, NH – Dartware, developer of InterMapper® network monitoring and mapping software, has announced a technology partnership with Inscape Data, makers of outdoor IEEE 802.11 AirEther™ Wireless Systems. Technology sharing will facilitate the creation of Inscape Data equipment probes that allow InterMapper to report on network performance and traffic with greater accuracy and detail.

“The vendor-specific probes we added in InterMapper 4.5.8 make it extremely easy for network managers to keep tabs on their mission-critical Inscape Data systems,” explains Rich Brown, Dartware CEO. “The Inscape Data probes return signal strength, signal to noise ratio, outages, and other critical performance metrics giving technicians the information they need to tune equipment and connections before users report problems.”

Wireless providers use InterMapper maps and reports to proactively see and fix network problems associated with weather, power outages and restoration, virus outbreaks, and equipment failures. Its geographic maps allow efficient dispatch of technicians. Detailed data describing poor performance or traffic increases shorten time to fix.

“System integrators, governments, and schools rely on Inscape Data equipment – hotspots, base stations, routers, bridges, backhubs, and antennas – for data, voice, and video communications,” says David D. Lin, President of Inscape Data. “We build reliability into our wireless networking and video surveillance equipment and want to be sure our customers have all the tools they need to stay ahead of day-to-day, minute-to-minute issues.”

Availability: The Inscape Data equipment probes are currently available in InterMapper 4.5.8. InterMapper is available directly from InterMapper or through its international network of resellers and VARs which are listed at www.dartware.com.

About Dartware: Dartware, LLC develops the InterMapper® family of network monitoring software. InterMapper earns quick return on investment by proactively alerting administrators to potential slow-downs, crashes, other business interruptions. Its real-time, color-coded maps and other data displays provide users with an instant view of their network and device status. Dartware's software is installed in financial services, healthcare, retail, education, government and non-profit, WISP, and ISP organizations around the world. For more information, please visit <http://www.dartware.com>.

About Inscape Data: Inscape Data is the expert in long range wireless and IP based video systems. The company offers a full suite of turnkey key solutions for long range outdoor 2.4GHz, 5GHz, and IP based video security applications, including the IP67 and

IP68 certified all-weather AirEther™ IEEE 802.11a/b/g Wireless Systems and the AirGoggle™ IP based Video Security Systems based on MPEG-4 video compression standards.

The company was founded on a culture of business excellence and product innovation. With strong, dependable, and proven manufacturing capabilities in Taiwan, Inscape Data is dedicated to deliver cutting-edge products that provide differentiated value to its customers and partners worldwide. Continuing in this pioneering spirit of excellence and innovation as the expert in long range wireless and IP based video systems, Inscape Data is committed to continuously develop and introduce new waves of technology solutions with a unique competitive edge to the marketplace in the future.
